

September 3, 2014

Mr. Rolando Jeria
Chief Engineer
San Gold Corporation
P.O. Box 111
ML-63 Antonio Road
Bissett, Manitoba
R0E 0J0

Dear Rolando:

Project No: 60322895

**Regarding: East Tailings Management Area
Dyke 9 Stage 1 (Starter Dyke) Construction
Station 0+000 to 0+340
Record Report Letter**

AECOM Canada Limited (AECOM) is pleased to submit this letter to certify the construction of Stage 1 of Dyke 9 between station 0+000 and 0+340.

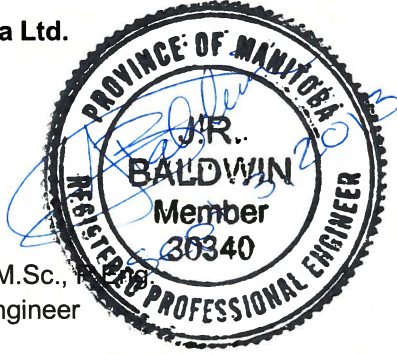

Due to a growing need for storage capacity, the first 340 m of Dyke 9 (i.e., western reach) was constructed so that the area bound by the completed section of the dyke can be utilized for storage of water. Construction of the remaining length of the dyke to a clay core elevation of 275.2 m ASL (i.e., Phase 2 design elevation) is ongoing.

AECOM is currently compiling a record report complete with construction details, drawings and photos for the dyke section from station 0+000 to 0+340. However, in order to assist San Gold with expediting the process of acquiring approvals for use of the area, AECOM prepared this letter to certify that the section of dyke under consideration has been constructed according to the Drawings and Specifications for Phase I and Phase II of construction (AECOM, August 2013 and AECOM, September 2013).

The Construction Performance Monitoring and Quality Control Program (AECOM, January 2014) was implemented by AECOM staff in full time attendance during construction. Field and laboratory testing and instrumentation installation and monitoring were completed in accordance with the above program. Field and laboratory tests will be summarized in the record report. Instrument locations and results will also be included in the report.

AECOM provided resident and non-resident engineering services during the construction with standard degree of care and in accordance to locally acceptable engineering principles and procedures. Should you have any questions or require clarification, please feel free to contact Jared Baldwin or Faris Khalil at 204-477-5381.

Sincerely,
AECOM Canada Ltd.

Jared Baldwin, M.Sc.,
Geotechnical Engineer
