Dear Sirs:

Re Ambient Air Quality Monitoring and Assessment of Potential Impacts on the Environment and Human Health, July 31 - August 4, 2018, Final Report

Manitoba Sustainable Development has reviewed the final report entitled Ambient Air Quality Monitoring and Assessment of Potential Impacts on the Environment and Human Health submitted on March 8, 2019 by BOMA Environmental & Safety Inc. as per the directions given by letter dated October 17, 2017 in regards to Environment Act Licence No. 28566 RRRR.

The report is accepted as received and the technical review committee noted the following:

- Sampling occurred in accordance with the plan approved by Manitoba Sustainable Development in the letter dated June 20, 2018.
- The monitoring was a short term study and the conclusions drawn are representative of the process and meteorological conditions during the study period.
- There were two parameters (calcium and iron) that exceeded air quality criteria. The report indicates that these are in the form of calcium oxide and iron oxide and unlikely to impact the Dufresne residential area.
- The process of shredding end-of-life vehicles and white goods appeared as the greatest source of air emission generated at the site.
- Report concluded that air emissions from Industrial Metals would not likely have a significant impact on the Dufresne neighborhood.

If you have any questions regarding the above, please contact Yvonne Hawryliuk, Provincial Manager at 204-945-5305.

Yours sincerely,

Scott Davies,
A/Director, Environmental Compliance and Enforcement
