

## Responsibilities

### Hazardous Waste Generators

Persons who produce, own or store hazardous waste are called hazardous waste generators. Generators are the first link in the cradle-to-grave system.

Following is a summary of the basic responsibilities of hazardous waste generators in terms of the hazardous waste tracking system:

- Identification and classification of all hazardous wastes generated.
- Initial registration as a hazardous waste generator by submitting a completed [Hazardous Waste Generator Registration form \[en français\]](#) to Manitoba Environment and Climate Change; assigned a hazardous waste generator registration number (Provincial ID No.) by Manitoba Environment and Climate Change.
- Submit an amended registration form (use [Hazardous Waste Generator Registration form](#)) to Manitoba Environment and Climate Change as required, to report changes.
- Use licensed hazardous waste carriers to transport hazardous waste (with the exception of certain materials that are exempted from the legislation).
- Dispose of hazardous waste through licensed disposal facilities (with the exception of certain facilities that are exempted by the Act).
- Ensure that Part A of the manifest is completed; the authorized person must sign Part A to certify that the information is correct; retain a copy for two years; ensure that a copy is sent to appropriate authority if an interprovincial or trans-border shipment.
- Registration as a PCB storage site if storing PCB waste - obtain approval from Manitoba Environment and Climate Change prior to disposal of PCB waste.
